1	Introduction	1
2	Preliminaries	3
2.1	Introduction	3
2.2	Definition of a dynamical systems	3
2.3	Stability of one dimensional maps	4
2.3.1	Stability and the Cobweb diagram	5
2.3.2	Criteria for stability	7
2.3.3	Periodic points and their stability	8
2.4	Stability of two dimensional maps	9
2.4.1	Stability notation	9
2.4.2	Stability of linear system	10
2.4.3	Stability analysis of nonlinear discrete systems	11
2.4.4	Invariant manifolds	12
3	Bifurcation of one-dimensional maps	14
3.1	Introduction	14
3.2	The saddle-node bifurcation	15
3.3	The transcritical bifurcation	18
3.4	The pitchfork bifurcation	21
3.5	The period-doubling bifurcation	25

4	Bifurcation of two-dimensional maps	32
4.1	Introduction	32
4.2	Center manifolds	32
4.3	The Neimark-Sacker bifurcation	35
4.4	The trace-determinant plane	38
5	Bifurcation of logistic competition model	41
5.1	Introduction	41
5.2	Fixed points	42
5.3	Stability analysis	44
5.3.1	Stability of the extinction fixed point	44
5.3.2	Stability of two exclusion fixed points	45
5.3.3	Stability of the coexistence fixed point	56
5.4	Bifurcation analysis	59
6	Analysis of discrete-time predator-prey system	63
6.1	Introduction	63
6.2	Stability analysis of predator-prey system	64
6.3	Stability analysis of predator-prey system with Allee effect . .	67
6.4	Bifurcation analysis	74
6.5	Numerical examples	79
7	Bifurcation analysis a population model	83
7.1	Introduction	83
7.2	Stability analysis	83
7.3	Bifurcation analysis	86
7.4	Numerical examples	91
A	The Matlab 7.12 codes	94
A.1	The cobweb diagram of logistic map	94

A.2	The bifurcation diagram of logistic map	95
A.3	The bifurcation diagram of predator-prey model	96
A.4	The bifurcation diagram of model (7.1)	96
