Contents

Abstract **vi**

1 Introduction **1**

1.1 Preliminary 1

1.2 Equilibrium Points 3

1.3 Stability Theory 3

1.4 The Cobweb Diagram 8

1.5 Periodicity and General Background 9

2 High Order Difference Equations **12**

2.1 General theory of Linear Difference Equations 12

2.2 Limiting Behavior of the Solutions 21

3 Dynamics of $x_{n+1} = \frac{\beta x_n + \gamma x_{n-k}}{A + B x_n + C x_{n-k}}$ **28**

3.1 Changing the Variables 31

3.2 Equilibrium Points 32
3.3 Linearization of the Difference Equation 34
3.4 Local Stability of the Equilibrium Points 36
3.5 Boundedness 42
3.6 Invariant Intervals 43
3.7 Existence of Two Cycles 53
3.8 Semi-cycle Analysis 55
3.9 Analysis of Global Stability 60

4 Special Cases of $\beta\gamma ABC = 0$ **74**

4.1 One of the Parameters $\beta\gamma ABC = 0$ 74
4.2 Two of the Parameters $\beta\gamma ABC = 0$ 83

5 Numerical Approach **91**

5.1 Numerical Approach of Local and Global Stability 92
5.2 Numerical Approach of Unstable Case 93

A Appendix **99**

A.1 Matlab Code-Plot Difference Equation 99
A.2 Matlab Code-Simplify the Linearized Equation 101
