CONTENTS

ABSTRACT 2

CONTENTS 3

LIST OF FIGURES 5

ACKNOWLEDGEMENTS 8

CHAPTER 1: INTRODUCTION

1.1. General 9
1.2. Radioactivity 10
1.3. Neutron activation 11
1.4. Electromagnetic radiation 13
1.5. Internal Conversion 19

CHAPTER 2: THEORY

2.1. Nucleon shell model 21
2.2. Collective vibrations 23
2.3. Collective rotation 25
2.4. Interacting Boson Model (IBM) 28
2.5. Other models 40

CHAPTER 3: EXPERIMENTAL ARRANGEMENTS

3.1. Single spectra measurements 45
3.2. Energy and efficiency calibrations 48
3.3. Time Spectroscopy 51
3.4. Timing Problems 58
3.5. Time Spectrometer 62
3.6. Energy-time Spectroscopy 69
3.7. System Performance 75
3.8. Source Preparations 91

CHAPTER 4: STUDIES OF THE ^{152}Gd ISOTOPE

4.1. Introduction 94
4.2. Results 96
4.2.1. Singles Spectra 96

4.2.2. Coincidence spectra 96
4.3. Decay scheme and level properties 104
4.4. Nuclear model calculations 116
4.4.1. Collective vibrations 116
4.4.2. The Interacting Boson Model (SU(5) limit) 128
4.5. Quasi-structure and negative parity levels 127
4.6. Conclusion 129

CHAPTER 5: STUDIES OF THE ^{152}Sm ISOTOPE

5.1. Introduction 135
5.2. Results 136
5.2.1. Lifetime of the 122 keV level 136
5.2.2. Singles and coincidence spectra 137
5.3. Decay scheme and level properties 155
5.4. Collective rotation 161
5.5. The Interacting Boson Model (IBM) 176
5.6. Other levels 179
5.7. Conclusion 183

CHAPTER 6: STUDIES OF THE ^{182}W ISOTOPE

6.1. Introduction 188
6.2. Results 190
6.2.1. Singles Spectra 190
6.2.2. Coincidence Spectra 191
6.2.3. Lifetime measurements 194
6.3. Discussion 207
6.3.1. Decay scheme 207
6.3.2. Nuclear model calculations 212
6.3.3. Energy band structure 218
6.4. Conclusion 227
