<u>CHAPTER 1</u>	16
1.1 INTRODUCTION	17
<u>CHAPTER 2</u>	19
<u>INTRODUCTION TO FIBRE REINFORCED CONCRETE</u>	19
✓ 2.1 INTRODUCTION	5
2.2 REINFORCED CONCRETE	6
✓ 2.2 a Reinforced Concrete	6
2.2 b Prestressed Concrete	6
2.2 c Micro reinforcement	7
✓ 2.3 PROPERTIES OF FIBRE REINFORCED CONCRETE	8
2.3 a Fibre reinforced concrete with fibre of low modulus of elasticity	8
2.3 b Fibre reinforced concrete with fibres of high modulus of elasticity	9
✓ 2.4 TYPE OF FIBRE	9
2.4 a Asbestos fibre	9
2.4 b Carbon fibre	10
2.4 c Steel fibre	10
2.4 d Glass fibres	10
✓ 2.5 FACTORS AFFECTING THE STRENGTH OF FIBRE REINFORCED CONCRETE	13
2.5.1 Fibre orientation	13
2.5.2 Fibre matrix interfacial bond	13
2.5.3 Fibre volume fraction	15
2.5.4 Fibre dispersion and quality control	16
2.5.6 Vibration of fibrous composites	16

CHAPTER 2 EQUIPMENT AND PROCESS DEVELOPMENTPage No.

✓ 2.6	FAILURE MECHANISM OF FIBRE CONCRETE	16
2.6.1	Crack arrest mechanism (spacing concept)	17
2.6.2	The composite approach two phase composite	18
2.7	PRODUCTION	19
2.7.1	Methods of production	19
2.7.2	Curing	23
2.7.3	Quality control	23
2.7.3a	Green state	23
2.7.3b	Long term assessment	23
2.7.3c	Prototype testing	24
2.8	POLYPROPYLENE FIBRE COMPOSITES	24

✓ CHAPTER 3 THEORETICAL BEHAVIOUR OF FIBRE REINFORCED CONCRETE

3.1	INTRODUCTION	33
3.2	COMPOSITE HAVING LONG ALIGNED FIBRE	35
3.3	TENSILE STRESS-STRAIN CURVE FOR BONDED FIBRE COMPOSITE	40
3.4	THE STRAIN ENHANCEMENT (Bonded Case)	41
3.5	BONDED UNBONDED CASE	42
3.6	EFFICIENCY OF FIBRE RANDOMNESS	42
3.7	SHORT FIBRE REINFORCED COMPOSITE	44
3.7a	Aligned fibre	44
3.7b	Random short fibrous composite	46
✓ 3.8	THEORETICAL FLEXURAL BEHAVIOUR	48
✓ 3.9	CONCLUSION	49

CHAPTER 4 EQUIPMENT AND PROCESS DEVELOPMENT

4.1	INTRODUCTION	58
4.2	PROCESS AND EQUIPMENT	58
4.2a	The concrete spray system	58
4.3	THE MIX PROPORTIONS	61
4.4.1	Fibre cutting and dispensing	62
4.4.2	The main problems encountered	63
4.5.1	Spraying and compacting the fibre reinforced concrete	65
4.5.2	Compaction.	65

CHAPTER 5 POLYPROPYLENE FIBRE COMPOSITE MATERIAL INVESTIGATION TEST PROGRAM, TEST METHOD, MATERIALS, RESULTS AND DISCUSSION

5.1.1	Scope	72
5.1.2	The tests undertaken	73
5.1.3	The test program	74
5.2	TEST PROCEDURE	75
5.2.1	Bond strength	75
5.2.2	Test 2 : Direct tensile test	76
5.2.3	Test 3 : Flexural properties	78
5.2.4	Concrete crushing strength	80
5.2.5	Specific gravity of concrete	80
5.2.6	Determination of fibre content	81
5.3	TEST RESULTS AND ANALYSIS	82
✓ 5.3.1	Flexural behaviour	83
5.3.1a	At 1st crack	83
5.3.2b	After 1st crack	84
5.3.1c	Toughness index and fibre content	84
5.3.2	The composite behaviour under direct tension	85

	<u>Page No.</u>
5.3.2a At 1st crack	85
5.3.2b After cracking	86
5.3.2c Toughness index in direct tension	87
5.4 EFFECT OF MATRIX FINENESS ON THE COMPOSITE	88
5.5 SPRAYED. NON VIBRATED COMPOSITES	88
5.6 CONCLUSIONS	90
5.6.1 Mixing	90
5.6.2 Compaction	90
5.6.3 Properties Improvement	91
5.6.4 Future work	91
 <u>CHAPTER 6 COMPARATIVE STUDY BETWEEN FIBRILLATED FIBRE COMPOSITE AND FIBREMESH COMPOSITES</u>	
6.1.1 Introduction	161
6.1.2 Material properties	162
6.2 TESTS AND TEST PROGRAM	163
6.2.1 Test program	163
6.2.2 Mixing	163
6.2.3 Test and test procedures	164
6.3 RESULTS ANALYSIS AND CONCLUSIONS	166
6.3.1 The composite compressive strength	166
6.3.2 Effect of fibre on compaction	167
6.3.3 Flexural properties of the composites	167
6.3.3a Prisms	168
6.3.3a1 The effect of fibre at 1st crack	168
6.3.3a2 Effect of fibre at ultimate	168
6.3.3b Slab specimens	169
6.3.3b1 At 1st crack	171
6.3.3b2 After the 1st crack	171
6.3.3c Effect of fibre on toughness index	172
6.4 CONCLUSIONS	173

CHAPTER 7 ONE WAY SLABS

7.1	TEST PROGRAM	210
7.2	TEST PROCEDURE - ONE WAY SLAB	212
7.3	RESULTS ANALYSIS AND DISCUSSION - ONE-WAY SLABS	212
7.3.1	The matrix compressive strength	213
7.3.2	Behaviour in flexure	213
7.3.2.1	Behaviour at 1st crack	214
7.3.2.2	Behaviour just after 1st crack	214
7.3.2.3	Behaviour after 1st crack	215
7.4	TOUGHNESS INDEX	218
7.5	COMPARISON BETWEEN SLABS TESTED FACE UP AND FACE DOWN	218
7.6	SPRAYED FIBRILLATED FIBRE COMPOSITE VS. SPRAYED FIBREMESH COMPOSITE	220

CHAPTER 8 TWO-WAY SLABS

8.1	TEST PROGRAM	253
8.2	TEST PROCEDURE	254
8.3	YIELD LINE ANALYSIS OF TWO-WAY SLABS	255
8.4	RESULTS AND DISCUSSION	258
8.4.1	Matrix compressive strength	259
8.4.2	Slab behaviour	259
8.4.2.1	Behaviour at 1st crack	260
8.4.2.2	Behaviour after 1st crack	260
8.4.2.3	Toughness	262
8.5	THEORETICAL VS. TEST LOAD OF TWO-WAY SLABS	263
8.6	TENSILE STRESS DEVELOPED AT ULTIMATE TWO WAY SLABS VS. ONE-WAY SLABS	265
8.7	DRUABILITY OF THE COMPOSITE AND THE STRENGTH OF 90 DAY SPECIMEN	266
8.8	SLAB PERFORMANCE AS A STRUCTURAL ELEMENT	272

CHAPTER 9 CONCLUSIONS AND RECOMMENDED FUTURE WORK

9.1	CONCLUSIONS	305
9.1.1.	Composite production	305
9.1.2	Tests and test specimens	307
9.1.3	Durability of the composite	308
9.1.4	Fibre composite products and performance	309
9.2	RECOMMENDED FUTURE WORK	310
9.2.1	Production of the composite	310
9.2.2	Materials	311
9.2.3	Trials for various prototype products	312
