| List of Photos                                                                    | XVI  |
| List of Abbreviations                                                             | XVII |
| <br>                                                                              |      |
| 1. Introduction                                                                   | 1    |
| 1.1 Background                                                                    | 1    |
| 1.2 Aim of research                                                               | 3    |
| 1.3 Objective of thesis                                                           | 3    |
| 1.4 Thesis Outline                                                                | 4    |
| <br>                                                                              |      |
| 2. Literature review                                                              | 5    |
| 2.1 Introduction                                                                  | 5    |
| 2.2 Wastewater Treatment                                                          | 6    |
| 2.3 Conventional Wastewater Treatment System                                      | 6    |
| 2.4 Anaerobic Wastewater treatment process                                        | 7    |
| 2.5 Differences between aerobic and anaerobic wastewater treatment processes      | 7    |
| 2.6 Anaerobic degradation processes in wastewater treatment                       | 8    |
| 2.7 Environmental factors affecting anaerobic degradation in wastewater treatment | 11   |
| 2.8 UASB reactor                                                                  | 12   |
| 2.9 Design consideration for UASB reactors                                        | 14   |
| 2.10 Effect of solids retention time (SRT)                                        | 16   |
| 2.11 Effect of Suspended solids on anaerobic treatment                            | 17   |
| 2.12 The UASB-septic tank system                                                  | 18   |
| 2.13 Application of UASB in tropical Country                                      | 21   |

|          |                                                                                     |    |
|----------|-------------------------------------------------------------------------------------|----|
| 3.       | Materials and Methods                                                               | 26 |
| 3.1      | Location                                                                            | 26 |
| 3.2      | Experimental set-up                                                                 | 26 |
| 3.3      | Reactors sewage feeding                                                             | 27 |
| 3.4      | Pilot plants operation and start-up                                                 | 28 |
| 3.5      | Sampling                                                                            | 28 |
| 3.6      | Analytical Methods                                                                  | 28 |
| 3.6.1    | Chemical analysis                                                                   | 29 |
| 3.6.1.1. | Chemical Oxygen Demand (COD)                                                        | 29 |
| 3.6.1.2. | Biological Oxygen Demand (BOD)                                                      | 29 |
| 3.6.1.3. | Volatile Fatty Acid (VFA)                                                           | 29 |
| 3.6.1.4. | Kjeldhal Nitrogen (NKj-N)                                                           | 31 |
| 3.6.1.5. | Ammonia (NH <sub>4</sub> -N)                                                        | 31 |
| 3.6.1.6. | Sulfate (SO <sub>4</sub> <sup>-2</sup> )                                            | 31 |
| 3.6.1.7. | Total Phosphorous (Total P) and Ortho-Phosphate<br>(PO <sub>4</sub> <sup>3-</sup> ) | 31 |
| 3.6.2    | Physical analysis                                                                   | 31 |
| 3.6.2.1. | Total and suspended Solids (TS, TSS)                                                | 32 |
| 3.6.2.2. | Volatile and Suspended Solids (VS, VSS)                                             | 32 |
| 3.6.2.3. | Sludge Volume Index (SVI)                                                           | 32 |
| 3.6.2.4. | pH                                                                                  | 32 |
| 3.6.2.5. | Temperature                                                                         | 32 |
| 3.6.2.6. | Color                                                                               | 32 |
| 3.6.2.7. | Atmospheric pressure                                                                | 32 |
| 3.7      | Batch experiments                                                                   | 33 |
| 3.7.1    | Stability                                                                           | 33 |
| 3.7.2    | Biodegradability                                                                    | 34 |
| 3.8      | Calculations                                                                        | 34 |
| 3.8.1    | Removal efficiency                                                                  | 34 |
| 3.8.2    | Hydrolysis, Acidification and Methanogenesis                                        | 34 |
| 3.8.3    | COD - mass balance                                                                  | 35 |
| 3.8.4    | Stability and Biodegradability calculations                                         | 36 |
| 3.9      | Statistical analysis of data                                                        | 36 |

|          |                                                                          |    |
|----------|--------------------------------------------------------------------------|----|
| 4.       | Results and Discussion                                                   | 38 |
| 4.1      | Influent sewage characteristics                                          | 38 |
| 4.2      | Performance of the two UASB-septic tank reactors                         | 41 |
| 4.2.1    | COD Removal efficiency                                                   | 41 |
| 4.2.1.1  | COD <sub>tot</sub>                                                       | 41 |
| 4.2.1.2  | COD <sub>sus</sub>                                                       | 43 |
| 4.2.1.3  | COD <sub>col</sub>                                                       | 44 |
| 4.2.1.4  | COD <sub>dis</sub>                                                       | 46 |
| 4.2.1.5  | VFA                                                                      | 47 |
| 4.3      | Biodegradability of effluent                                             | 48 |
| 4.4      | Hydrolysis, Acidogenesis and Methanogenesis                              | 50 |
| 4.5      | COD mass balance                                                         | 52 |
| 4.6      | Biogas production                                                        | 54 |
| 4.7      | Characteristics of the retained sludge in the UASB- septic tank reactors | 56 |
| 4.8      | Scum layer and sludge washout phenomenon                                 | 58 |
| 4.9      | BOD Removal Efficiency                                                   | 59 |
| 4.10     | TSS and VSS removal efficiency                                           | 60 |
| 4.11     | Nutrient removal efficiency                                              | 63 |
| 4.11.1   | Nitrogen removal                                                         | 63 |
| 4.11.1.1 | (NH <sub>4</sub> <sup>+</sup> ) removal                                  | 63 |
| 4.11.1.2 | (N <sub>kj</sub> -N)                                                     | 64 |
| 4.11.2   | Phosphorus removal                                                       | 65 |
| 4.11.2.1 | (Total – P)                                                              | 65 |
| 4.11.2.2 | Ortho phosphorous                                                        | 66 |
| 4.12     | Sulfate removal efficiency                                               | 67 |
| 4.13     | pH in the UASB- septic tank reactors                                     | 68 |
| 4.14     | General results                                                          | 69 |
| 5.       | Conclusion and Recommendations                                           | 73 |
| 5.1      | Conclusion                                                               | 73 |
| 5.2      | Recommendations                                                          | 74 |
